

Special Detail HOKX, HOOKER CHEMICAL Acid tank cars # 215

These special instructions outline one of the differences in the construction of HOKX 215 compared to the other ACF cars. By the general arrangement drawing this car had a wider running board.

This can be modeled using 0.020" X 0.0125" styrene (not supplied in kit) as shown.

The bill of materials for HOKX 217 and 219 also appear to have had one extra running board but there are no drawings or photos which show this. These can be added to the model if you wish.
