

Steel Plate Load

Steel plate was shipped from steel mills to finishing plants and fabricators by rail. If the plates could not be placed on the floor of the gondola, they were loaded on a diagonal, cradled by a rack and secured by chain. This layout kept the height of the load within mandated clearance limits.

Sunshine Models kits are vacuum cast in gray urethane. The kit includes castings of two plates, lifting eyes and 6 triangular braces. Also provided are 12" of blackened chain, eyebolts, NBW and instructions. The load is sized for 70 ton, 52' gondolas, but may be adapted for smaller and lighter gondolas.

Kit #F20 Steel Plate Load with necessary blocking and tie-downs, (1930s-70s), \$25

- ___ Kit #48.1 Pennsy G-27 all steel 52" gondola, with Dreadnaught ends and riveted underframe and floor (1936), \$36
